

## BENEFIELD SEWER REPLACEMENT PROJECT

Ward(s): 7

Project Manager: Gulfport Department of Engineering

Engineering: Pickering Firm, Inc. – Andy Phelan (228) 432-5925

### Total Approved Budget

Source	Amount
Gulfport – 2014 Bond Issue	\$1,388,825.00
	\$1,388,825.00

### Project Scope:

Lying east of the Airport and bounded by Bernard Bayou on the north and east sides, the Benefield/Banner sewer system repeatedly has issues of backing up, particularly given heavy rainfall events. This project generally consists of a conditions assessment of and design of improvements to: approximately 17,000 linear feet of the existing sewer collection system. The purpose of this assessment is to identify sewer mains requiring removal and replacement (estimated at 12,000 linear feet) and mains requiring cured-in-place rehabilitation (estimated at 5,000 linear feet) along with repairs to associated manholes, services, lift stations, forcemains, and other related items.

Currently the engineer is under contract to perform the Sanitary Sewer Evaluation Survey (SSES).
